

June 19, 2015 Daily Report

(Presenting June 18 Progress and Plans Forward)

Refugio Incident

This daily report addresses elements listed in the *Order for Removal, Mitigation or Prevention of a Substantial Threat of Oil Discharge*. The elements include descriptions of 1) anticipated problems and planned resolutions, 2) significant developments, 3) work performed, 4) treatment and disposal information, 5) analytical data received, and 6) schedule of work. The following attachments contain detailed information pertaining to each listed element:

- **Summary of Anticipated Problems and Resolutions** (June 19)
 - Anticipated problems and planned resolutions

- **Executive Summary** (describing prior day, June 18)
 - Significant Developments
 - Work Performed
 - Disposal Information

- **CTEH Summary of Environmental Sampling Efforts** (June 18)
 - Analytical Data Received to Date

- **Incident Action Plan** (Effective June 17 06:00 – June 21 05:59)
 - Schedule of Work to be Performed (Form 204)

Summary of Anticipated Problems and Resolutions

Refugio Incident

June 19, 2015

Anticipated Problems	Planned Resolutions
<ul style="list-style-type: none">Limited beach access due to tide level.	<ul style="list-style-type: none">Continue with scheduling flexibility to allow work crews to adjust work location based on beach accessibilityContinue implementing the movement of cobble with buckets so it can be scraped while in high tide
<ul style="list-style-type: none">Timeline for reopening of El Capitan has been set for June 26th.	<ul style="list-style-type: none">Continued re-evaluation of work forces for the beach cleanup and repairs of state parks to ensure that the time line is met or exceeded.
<ul style="list-style-type: none">Cleanup on some areas of the beach will be limited due to safety concerns.	<ul style="list-style-type: none">Evaluate the use of additional safety precautions in areas of concern, engineering controls, additional PPE, etc.

Incident Command Post Santa Barbara
Refugio Oil Spill
Unified In All Missions
Status as of:
18 Jun 2015 / 1800 PDT / Response Day 31
www.refugioresponse.com

Executive Summary

The ICP is currently overseeing operations in Santa Barbara and Ventura County, 96.5 miles of shoreline, 30 miles of offshore and inland where the response originated. Plains All American estimates that the maximum potential release is 101,000 gallons spilled.

Samples have been collected at all tar ball sites and will be fingerprinted to determine if there is any correlation to the Refugio Beach Incident.

Shoreline Cleanup Assessment Techniques (SCAT) Phase II end points have been achieved for 91% of the impacted shoreline. The attached graphic depicts detailed data about this progress. There were no updates for SCAT on the 18th of June.

	Shoreline Oiling Categories (miles and %) - Refugio Incident													
Most Recent Survey Date	Heavy		Moderate		Light		Very Light		Tar balls (<1%)		No Oil Obs.		Total Oiled Shoreline *	Total Surveyed Shoreline *
6/15/2015	1.82	2.2%	3.44	4.2%	13.45	16.3%	9.76	11.9%	24.62	29.9%	29.18	35.5%	53.08	82.26
* Totals may not add up due to rounding														

Current Impacts

- The majority of oiling is located on beaches, cobble, riprap, and on rock faces between Arroyo Hondo and El Capitan Beach. Light oiling has been discovered as far as Point Mugu (east) and 2 miles west of Arroyo Hondo (west). These areas have been targeted for manual removal as needed.

Potential Impacts

- As free-floating oil progressed east, Coal Oil Point, Haskell Beach, Bacara Resort, and Goleta Beach were oiled, however it has yet to be verified whether light oiling is from natural seepage or the oil pipeline. Coal Oil Point is a sensitive habitat for Plovers; Goleta Beach is a popular swimming and water sports location.

Response Efforts

- Onshore:
 - Work continues on the bluff. Thursday Left lane Southbound 101 closed from 0900 – 1200. Right lane Southbound 101 closed from 1200-1800. Friday right lane Southbound 101 will be closed from 0900-1400.
- Shoreline:
 - 200 feet of hard and sorbent boom remain in place, protecting 1 sensitive site as identified in the ACP.

- El Capitan State Beach is scheduled to reopen on Friday, June 26th. Reservations for Refugio State Beach have been cancelled until July 9th, but may be extended beyond that date, depending on future operations.
- On Water:
 - No oily water mixture was collected, and the cumulative total remains 14,267 gallons. All snare boom has been removed.
 - The temporary safety zone remains in place for 6 NM of shoreline from Tajiguas creek to and including El Capitan Beach, extending out 500 yards from the shoreline. In addition, a 100 yard radius temporary safety zone remains in place around all vessels engaged in the recovery operations. We anticipate removing the safety zone on Friday, June 19th.
 - A 23 mile by 6 mile area offshore has been closed to fishing. CA Fish and Wildlife Patrol Boat remains on scene to enforce fishery closure. Sampling for finfish and shellfish impacts are ongoing, in order to determine timeframes for reopening the closed fishery. Results pending.
 - A 1000 foot temporary flight restriction within a 5 mile radius of Refugio Beach is in effect through 20 Jun 2015. An internal incident flight restriction remains in effect within ½ mile, or an altitude of 500ft, as well as no hovering allowed in the vicinity of Coal Oil Point to protect Snowy Plover habitat.

Impact Measurements

Waste Management (as of 18 June 2015)		
Material	Estimated Daily Total Removed (cubic yards)	Estimated Cumulative Total Removed (cubic yards)
Oiled Sand	0	960
Oiled Vegetation	0	795
Oiled Debris/PPE	0	705
Oiled Soil	0	5568
Culvert Soil	40	1640
Absorbent	0	225

	TOTAL Birds			TOTAL Mammals		
Date	Live	Dead	Date Totals	Live	Dead	Date Totals
18 Jun 2015	0	0	0	0	3	3
Cumulative Total	57	186	243	59	98	157

External Affairs

- Issued SCAT team photo release

Tribal and Elected Officials

- Chumash Tribal Members continue to provide cultural and archeological guidance and oversight as needed. 47 cultural monitors and 8 archeologists are supporting the response.
- Determined daily call-ins with Santa Barbara County/Goleta elected officials conference call no longer necessary. If needed the function will resume as determined by county officials.
- Representatives from the Native American Heritage Commission visited the ICP and various staging areas on Refugio and El Capitan Beaches.

Personnel Involved

- 845 (up from 781) workers are engaged in Field Operations.
- 109 (down from 126) personnel are assigned to the ICP.
- 954 (up from 907) total personnel are assigned to the response.

Equipment Involved

- 2 Vessels Assigned (3 vessels being deconned, 1 vessel conducting fisheries enforcement, 1 vessel collecting lobster and crab for sampling)
- 5 Vac trucks (Decon)

Refugio Incident
Summary of CTEH® Environmental Sampling Efforts
June 18, 2015

As part of response efforts, CTEH® began collecting product and environmental samples, i.e., water and/or sediment, on May 20, 2015. This environmental sampling has been conducted under a Unified Command-approved sampling plan. This report contains environmental sampling efforts completed to date by CTEH® in support of Refugio Incident response efforts. **Table 1**, below, provides a sample count for each type of environmental media collected by CTEH®. **Table 2** provides a summary of TPH¹ data reported in water samples to date. Maps of environmental sampling locations are provided as attachments.

Table 1: Environmental Preliminary Sample Summary
05/20/2015– 06/17/2015

Media	Matrix	Sample Count
Water	Surface Water	245
	Water Column	54
	Culvert/Flush Water	2
Sediment	Beach Sediment ²	30
	Ocean Sediment ³	15
Soil	Potential Backfill Soil/Sand	23
	Section Four Soil	22
	Trench Excavation Soil	22
	Background Soil	20
Petroleum	Product/Tar Ball Sample	36
	Sheen/Seep	14

² Beach sediment samples are collected from both the intertidal zone and on dry sand above the intertidal zone.

³ Ocean sediment samples were collected at the same location as the water column samples.

¹ For the purposes of this report, TPH represents a summation of TPH-Oil Range Organics (ORO), TPH-Diesel Range Organics (DRO), and TPH-Gasoline Range Organics (GRO).

CG IAP COVER SHEET	06/16/2015 17:35
(Rev. 4/04)	

1. Incident Name Refugio Incident	2. Operational Period (Date/Time) From 06/17/2015 06:00 To 06/21/2015 05:59	Operational Period Ops Period 18	INCIDENT BRIEFING ICS 202-CG
3. Objective(s)			
<p>Ensure the safety of response personnel and the public.</p> <p>Complete the excavation of visually contaminated soils in Section 4.</p> <p>Continue the cleanup of contaminated soils in Sections 1, 2, and 3, and initiate confirmation sampling in accordance with the "Removal Confirmation Sampling Plan".</p> <p>Continue the clean up of all open Divisions, maximizing clean up during optimal tidal periods, in accordance with the Shoreline Treatment Recommendations to meet Phase II endpoints.</p> <p>Develop, gain approval, and implement a clean-up plan for Section 5</p> <p>Continue to protect environmentally and culturally sensitive areas within the open Divisions.</p> <p>Recover and rehabilitate injured and oiled wildlife and return to the wild.</p> <p>Minimize environmentally sensitive and socioeconomic impacts.</p> <p>Keep public and stakeholders informed of positive progress and all response activities.</p> <p>Develop products to effectively communicate, with best available science and historical data, source transport and fate of released oil and naturally occurring seep oil throughout the area.</p> <p>Provide endpoint progress data daily.</p> <p>Effectively implement transition / demobilization plans.</p>			
4. Operational Period Command Emphasis (Safety Message, Priorities, Key Decisions/Directions)			
<p>Clean the Divisions to end points.</p> <p>Communicate positive message regarding cleanup progress.</p> <p>Explain source fate and transport.</p> <p>Implement Decon and Demob.</p> <p>Integrate local representation with SCAT to <u>assist with oversight</u> to concur with assessments.</p> <p>Continue to integrate local jurisdictional agencies with operations associated with Sections 1 thru 5.</p> <p>Transition on-water recovery operations to include the removal of snare.</p> <p>Continue to emphasize safety during critical lifts in Section 4.</p>

7. Work Assignments					
<p>Wildlife Recon. Team - Collect real time data on animals at risk and staff the Wildlife Hotline.</p> <p>Wildlife Recovery/Stabilization Teams - Coordinate and supervise recovery and stabilization of live and dead oiled wildlife in assigned divisions and in response to reports.</p> <p>Care/Processing - Document oiling status, conduct intake examinations, necropsy dead animals, provide pre-wash care, clean oil from affected animals, return animals to normal function, and release in clean environment.</p> <p>Should two consecutive days of no collected live oiled animals occur, a phased reduction in recovery and field stabilization operations, per approved plan, will occur.</p>					
8. Special Instructions					
<p>Attend morning safety and planning briefing. Immediately report any injury to supervisor and complete an injury report form. *Personnel must have completed 24-hour HAZWOPER training and OWCN Wildlife Recovery Levels 1 and 2, at minimum.</p> <p>Instructions for Dead Wildlife and Natural Resource Protection.</p> <p>Any LIVE oiled wildlife (birds, mammals, or sea turtles) observed or incidentally collected in clean up operations should be immediately called in to the Wildlife Hotline at 877-823-6926.</p> <p>Any DEAD oiled birds, mammals, or sea turtles observed as part of cleanup operations should be called in to the team's supervisor. Supervisors can instruct the team in separating the oiled animal from the regular waste stream and (ideally) collecting it in a separate plastic bag, labeled with division/assignment area, and called into the Wildlife Hotline at 877-823-6926 for Recovery personnel to arrange pick up.</p> <p>For all other DEAD oiled wildlife (marine organisms) discontinue segregating these - they will not be picked up. Dispose with the rest of the oiled material being removed.</p> <p>Do not initiate any on-shore response or cleanup at Coal Oil Point without consulting the USFWS and California Dept of Fish and Wildlife.</p>					
SAFETY MESSAGE					
All response personnel are to be cautious of moving vehicles at all times and look in all directions before proceeding. Response personnel should be aware that all railroad tracks are in active use and should show extreme caution when operating in vicinity of tracks.

ASSIGNMENT LIST		06/16/2015 12:00		ICS 204-CG (Rev.10/07)	

- Leave cultural materials in place at the site of discovery, and mark its location.
- Stop clean-up work in the vicinity surrounding the site, within a 6ft radius.
- Immediately inform the field supervisor, who in turn, should immediately inform the FOSC and/or an appropriately designated cultural resource specialist. Obtain/provide location on map by indicating latitude/longitude.

Report All Injuries require a immediate notification to Direct Supervisor.

Animal carcasses that have orange flagging indicates that no further action is needed. These flagged animals hae already been assessed and reported

8. Work Assignment Special Instructions, Special Equipment/Supplies Needed for Assignment WILDLIFE RECOVERY GROUP MINIMIZATION MEASURES Habitat-specific Measures These measures are intended to minimize impacts to all biological resources within the habitat and should be implemented to the extent possible regardless of whether listed species are present. Marine <ul style="list-style-type: none"> • Avoid entering kelp beds as much as possible. • Avoid boat traffic traveling near or through flocks of seabirds resting in the water. • Have a wildlife monitor present on all boats. • No spill response activities should take place within 1,000 feet of nesting seabirds. • If a sea otter is observed, keep all response activities as far away from the animal(s) as possible until an expert can be consulted. Riparian <ul style="list-style-type: none"> • Avoid entering wetted areas as much as possible. • Avoid disturbing vegetation as much as possible. • The number of access routes, size of staging areas, and the total area of the response should be limited to the minimum necessary to achieve the mission. Sandy Beach/Dune <ul style="list-style-type: none"> • Avoid entering vegetated dune habitat as much as possible. • If vehicle traffic is required in the beach, travel should be restricted to the wet sand as much as possible and should avoid driving over wrack. • Vehicle traffic should be operated at slow enough speeds to avoid/minimize impacts to wildlife (approximately 5 to 10 miles per hour). • Use pre-existing access routes through dune habitat; if new access routes are necessary a biologist should be consulted on their location. Estuarine <ul style="list-style-type: none"> • Avoid entering wetted habitat as much as possible. • Avoid disturbing vegetation as much as possible. • Utilize existing access routes; if new access routes are necessary a biologist should be consulted on their location. • Any listed plant species should be flagged and avoided. Species-specific Measures These measures are specifically targeted to minimize impacts to listed species during initial response; USFWS should be contacted immediately to provide incident-specific measures to best protect these species. Tidewater goby <ul style="list-style-type: none"> • Equipment and foot traffic entering wetted areas should be avoided to the maximum extent practical to prevent crushing tidewater gobies, their burrows, and eggs. Least Bell's vireos and/or southwestern willow flycatchers <ul style="list-style-type: none"> • Disturbance of riparian vegetation should be avoided as much as possible. California least tern and/or Western snowy plover <ul style="list-style-type: none"> • A qualified biologist should identify areas that may contain nests or chicks, and any entry into these areas should be avoided. • Any work required within nesting areas should be accompanied by a qualified biologist. • A qualified biologist should identify and demarcate access and egress routes. • The number of vehicles and number of vehicle trips should be reduced to the minimum needed to achieve the mission. • All activities near nests or chicks should occur on the lower beach (wet sand), if possible. • Watch for and avoid western snowy plovers sheltering in tire tracks and sandy depressions. • If vehicles are used, speed should be kept to less than 10 mph, and vehicles should remain on the lower beach (wet sand), if possible. If it is not possible to remain on the lower beach (e.g., it is high tide), responders should stop every 100 m and scan ahead with binoculars to look for western snowy plovers and California least terns on the beach. California red-legged frog <ul style="list-style-type: none"> • All egg masses should be avoided as much as possible and should only be relocated by a qualified biologist if oiling is imminent or response activities are sure to injure or kill the eggs. • Open excavations and trenches should be covered each night to prevent entrapment of frogs.

instruct the team in separating the oiled animal from the regular waste stream and (ideally) collecting it in a separate plastic bag, labeled with division/assignment area, and called into the Wildlife Hotline at 877-823-6926 for Recovery personnel to arrange pick up.

For all other DEAD oiled wildlife (marine organisms) discontinue segregating these - they will not be picked up. Dispose with the rest of the oiled material being removed.

SAFETY MESSAGE

All response personnel are to be cautious of moving vehicles at all times and look in all directions before proceeding. Response personnel should be aware that all railroad tracks are in active use and should show extreme caution when operating in vicinity of tracks.

All PPE shall be worn in accordance with the Site Specific JHA and Site Safety Plan.

HISTORICAL/CULTURAL GUIDELINES

Leave cultural materials in place at the site of discovery, and mark its location.

- Stop clean-up work in the vicinity surrounding the site, within a 6ft radius.
- Immediately inform the field supervisor, who in turn, should immediately inform the FOSC and/or an appropriately designated cultural resource specialist. Obtain/provide location on map by indicating latitude/longitude.

Report All Injuries require a immediate notification to Direct Supervisor.

HAZARD MITIGATION

All personnel operating in a restricted area shall wear appropriate PPE (Minimum of Tychem, face shield, neoprene gloves and rubber boots are required for workers performing pressure wash ops).

Respiratory protection may be required to be used by all personnel base on continous air monitoring readings

All personnel are reminded to stay hydrated and to take breaks as needed.

Notify Assistant Safety Officer if safety issues arise.

Workers should be cautious of slick surfaces and pressurized lines that may be present during decon ops.

PROTECTION GROUP MINIMIZATION MEASURES Habitat-specific Measures These measures are intended to minimize impacts to all biological resources within the habitat and should be implemented to the extent possible regardless of whether listed species are present. Marine <ul style="list-style-type: none"> • Avoid entering kelp beds as much as possible. • Avoid boat traffic traveling near or through flocks of seabirds resting in the water. • Have a wildlife monitor present on all boats. • No spill response activities should take place within 1,000 feet of nesting seabirds. • If a sea otter is observed, keep all response activities as far away from the animal(s) as possible until an expert can be consulted. Riparian <ul style="list-style-type: none"> • Avoid entering wetted areas as much as possible. • Avoid disturbing vegetation as much as possible. • The number of access routes, size of staging areas, and the total area of the response should be limited to the minimum necessary to achieve the mission. • During the typical breeding season for riparian birds (March 1 – September 15), a biologist should survey riparian vegetation to identify, flag and avoid nests as much as possible. • Vegetation should be hand trimmed to remove affected portions as necessary; roots should be left in place. • Response activities should avoid or minimize changes in channel morphology • No heavy equipment (bobcats, back hoes, etc.) or earth moving in, or next to the creek shall be used without prior DFW approval. • Any listed plant species should be flagged and avoided. • For areas potentially occupied by California red-legged frogs, least Bell's vireos, southwestern willow flycatchers, see species-specific minimization measures. Sandy Beach/Dune <ul style="list-style-type: none"> • Avoid entering vegetated dune habitat as much as possible. • If vehicle traffic is required in the beach, travel should be restricted to the wet sand as much as possible and should avoid driving over wrack. • Vehicle traffic should be operated at slow enough speeds to avoid/minimize impacts to wildlife (approximately 5 to 10 miles per hour). • Use pre-existing access routes through dune habitat; if new access routes are necessary a biologist should be consulted on their location. • Manual oil removal techniques should be used as much as possible. • All trash or anything that would attract wildlife to the work area should be removed on a daily basis. • Dead oiled wildlife should be removed or buried to minimize the secondary oiling of scavenging species. • For areas potentially occupied by western snowy plovers and/or California least terns, see species-specific minimization measures. Estuarine <ul style="list-style-type: none"> • Avoid entering wetted habitat as much as possible. • Avoid disturbing vegetation as much as possible. • Utilize existing access routes; if new access routes are necessary a biologist should be consulted on their location. • A biologist should be present throughout the duration of the cleanup activities. • Any listed plant species should be flagged and avoided. • A biologist should look for nests and establish suitable buffer areas to prevent impacts • For areas potentially occupied by tidewater gobies or light-footed clapper rails, see species-specific minimization measures. Coastal Bluff <ul style="list-style-type: none"> • Utilize existing access routes; if new access routes are necessary a biologist should be consulted on their location. • Previously-disturbed areas should be used for equipment staging and vehicle parking to the maximum extent practical. • Any listed plant species should be flagged and avoided. Species-specific Measures These measures are specifically targeted to minimize impacts to listed species during initial response, USFWS should be contacted immediately to provide incident-specific measures to best protect these species. Tidewater goby <ul style="list-style-type: none"> • Equipment and foot traffic entering wetted areas should be avoided to the maximum extent practical to prevent crushing tidewater gobies, their burrows, and eggs. • If supplemental water is used to flush culverts recommend gradually increasing the intensity/volume during the flush, as tidewater gobies aren't strong swimmers and could be injured or killed if there were sudden high currents. As the flow is being gradually increased, a biologist should be monitoring the culvert exit for tidewater gobies. 			
10. Prepared By Mike Nosbaum	Date/Time 06/16/2015 15:00	11. Reviewed By (PSC) T. Haug	Date / Time 06/16/2015 15:00

ASSIGNMENT LIST		06/16/2015 13:08	
		ICS 204-CG (Rev.10/07)	

- Prior to initiation of any dewatering or diversions, a qualified biologist should install 1/8 inch block nets outside the impact areas to exclude tidewater gobies. If widely separated sites are involved, more than one set of block nets should be placed to protect the work area. The nets should be installed on the first day of work and monitored thereafter for the duration of the work.
- Once the block nets are secured, qualified biologist(s) should remove all tidewater gobies found between the block nets using a 1/8 inch seine and dip nets, and relocate tidewater gobies to suitable habitat downstream of the proposed project site.
- If activities requiring block nets cannot be completed in one day, a new set or successive sets of block nets should be deployed each day, and subsequent surveys and capture/relocation performed accordingly. Fish released from one day's work should not be released into areas projected to be excavated on successive days.
- Should dewatering occur, any pumps used should be fitted with an anti-entrapment device(s) to prevent tidewater gobies from being drawn into the pump or impinged on intake screening.
- Prior to initiation of activities within occupied habitat, an informal tailgate session should be performed in order to inform response personnel about the tidewater goby avoidance/ minimization measures to be implemented during the response.

Least Bell's vireos and/or southwestern willow flycatchers

- Disturbance of riparian vegetation should be avoided as much as possible.
- A qualified biologist should conduct surveys within suitable habitat for least Bell's vireos and southwestern willow flycatchers during the nesting season (March 1 – September 15) prior to disturbance of riparian vegetation to identify and establish exclusion buffers around any nests (generally at least 500 feet).
- Manual equipment should be used in occupied habitat as much as possible to minimize disturbance from noise.
- If vegetation removal is required, roots should be left in place as much as possible.
- A qualified biologist should be present as much as possible during activities that impact suitable habitat.

California least tern and/or Western snowy plover

- All responders should be informed of the potential for western snowy plovers and/or California least terns to be impacted and of the avoidance/minimization measures being implemented.
- A qualified biologist should identify areas that may contain nests or chicks, and any entry into these areas should be avoided.
- Any work required within nesting areas should be accompanied by a qualified biologist.
- A qualified biologist should identify and demarcate access and egress routes.
- The number of vehicles and number of vehicle trips should be reduced to the minimum needed to achieve the mission.
- All activities near nests or chicks should occur on the lower beach (wet sand), if possible.
- Watch for and avoid western snowy plovers sheltering in tire tracks and sandy depressions.
- If vehicles are used, speed should be kept to less than 10 mph, and vehicles should remain on the lower beach (wet sand), if possible. If it is not possible to remain on the lower beach (e.g., it is high tide), responders should stop every 100 m and scan ahead with binoculars to look for western snowy plovers and California least terns on the beach.
- The amount of wrack, shells, and natural debris removed from the beach should be minimized. If shoreline pre-cleaning is necessary, debris should be stockpiled in an appropriate location (avoiding nesting locations) and returned to the beach after the threat of oil is gone, to the extent practical.

California red-legged frog

- All egg masses should be avoided as much as possible and should only be relocated by a qualified biologist if oiling is imminent or response activities are sure to injure or kill the eggs.
- Open excavations and trenches should be covered each night to prevent entrapment of frogs.

<p>Clarification for the Constraints Assessment Team (CAT) dated 16 June 2015. Activities related to cleaning of cliff faces and contiguous rocky prominences (June 6, 2015) -- The Unified Command has determined that removal and cleanup of oil from cobble and solid surfaces (bedrock and cliff face) should proceed across the entire beach in those Divisions that have not achieved cleanup endpoints. Constraints (limitations) to cleanup were identified in the Constraints Assessment Team (CAT): Activities Related to Cleaning of Cliff Faces and Contiguous (sic) Rocky Prominences; June 6, 2015. Certain cleanup constraints identified in the CAT document still apply while others have been superseded by the Unified Command decision and therefore are no longer in effect. The intent of this amendment is to clarify which elements of the CAT document remain in effect and those that do not.</p> <p>Cultural and Archaeological/Historic Properties constraints remain unchanged and the cultural monitors were consulted and agree with this course of action.</p> <p>Geology: "Unconsolidated soil/sediment (alluvium) with vertical faces exclude from work" remains unchanged.</p> <p>THE REMAINING TERMS AND CONDITIONS IN THE GEOLOGY SECTION OF THE CAT DOCUMENT REGARDING WORK EXCLUSION ZONES ARE NO LONGER IN EFFECT. OIL REMOVAL AND CLEANUP CAN PROCEED UP TO THE BASE OF THE CLIFF AS LONG AS THERE ARE NO OVERHEAD HAZARDS AND IF FOLLOWS THE TASKING FOUND IN THE IC204.</p> <p>Safety Monitors will utilize audible horns (alarms) to alert crew to possible falling rocks.</p> <p>_____</p> <p>DIVISION I MINIMIZATION MEASURES</p> <p>Habitat-specific Measures These measures are intended to minimize impacts to all biological resources within the habitat and should be implemented to the extent possible regardless of whether listed species are present.</p> <p>Sandy Beach/Dune</p> <ul style="list-style-type: none"> • Avoid entering vegetated dune habitat as much as possible. • If vehicle traffic is required in the beach, travel should be restricted to the wet sand as much as possible and should avoid driving over wrack. • Vehicle traffic should be operated at slow enough speeds to avoid/minimize impacts to wildlife (approximately 5 to 10 miles per hour). • Use pre-existing access routes through dune habitat; if new access routes are necessary a biologist should be consulted on their location. • Manual oil removal techniques should be used as much as possible. • All trash or anything that would attract wildlife to the work area should be removed on a daily basis. • Dead oiled wildlife should be removed or buried to minimize the secondary oiling of scavenging species. • For areas potentially occupied by western snowy plovers and/or California least terns, see species-specific minimization measures. <p>Species-specific Measures These measures are specifically targeted to minimize impacts to listed species during initial response. USFWS should be contacted immediately to provide incident-specific measures to best protect these species.</p> <p>Tidewater goby</p> <ul style="list-style-type: none"> • Equipment and foot traffic entering wetted areas should be avoided to the maximum extent practical to prevent crushing tidewater gobies, their burrows, and eggs. <p>California least tern and/or Western snowy plover</p> <ul style="list-style-type: none"> • All responders should be informed of the potential for western snowy plovers and/or California least terns to be impacted and of the avoidance/minimization measures being implemented. • A qualified biologist should identify areas that may contain nests or chicks, and any entry into these areas should be avoided. • Any work required within nesting areas should be accompanied by a qualified biologist. • A qualified biologist should identify and demarcate access and egress routes. • The number of vehicles and number of vehicle trips should be reduced to the minimum needed to achieve the mission. • All activities near nests or chicks should occur on the lower beach (wet sand), if possible. • Watch for and avoid western snowy plovers sheltering in tire tracks and sandy depressions. • If vehicles are used, speed should be kept to less than 10 mph, and vehicles should remain on the lower beach (wet sand), if possible. If it is not possible to remain on the lower beach (e.g., it is high tide), responders should stop every 100 m and scan ahead with binoculars to look for western snowy plovers and California least terns on the beach. • The amount of wrack, shells, and natural debris removed from the beach should be minimized. If shoreline pre-cleaning is necessary, debris should

7. Work Assignments					
Conduct shoreline cleanup in segments per the Shoreline Treatment Recommendation (STR) unless otherwise directed by the Division Supervisor due to operational need.					
Supervisors should evaluate their entire area of responsibility and report status changes to their Branch Director on a daily basis.					
Your entire area of responsibility has been surveyed by SCAT.					
Conduct shoreline clean up in accordance with SCAT methodology.					
STR's have been established throughout your area of responsibility.					
SCAT is not required to confirm achievement of Phase 1 endpoints.					
Crews may be deployed from other areas as conditions dictate.					
8. Special Instructions					
Operations will work up to the cliff edges as long as there are no direct overhead hazards to harm workers. Safety will use an audible alarm to notify workers of any rock or dirt movement. At the sound of the audible alarm all workers will move to a safe area and the site will be reassessed. (See 204a for further clarification from UC -dated 16 June 2015).					
ATV's not allowed in exclusion zones at El Capitan and Refugio.					
All light towers are to be facing away from the sand beach until otherwise instructed by Unified Command.					
Instructions for Dead Wildlife and Natural Resource Protection.					
Any LIVE oiled wildlife (birds, mammals, or sea turtles) observed or incidentally collected in cleanup operations should be immediately called in to the

Wildlife Hotline at 877-823-6926.

Any DEAD oiled birds, mammals, or sea turtles observed as part of cleanup operations should be called in to the team's supervisor. Supervisors can instruct the team in separating the oiled animal from the regular waste stream and (ideally) collecting it in a separate plastic bag, labeled with division/assignment area, and called into the Wildlife Hotline at 877-823-6926 for Recovery personnel to arrange pick up.

For all other DEAD oiled wildlife (marine organisms) discontinue segregating these - they will not be picked up. Dispose with the rest of the oiled material being removed

Do not initiate any on-shore response or cleanup at Coal Oil Point without consulting the USFWS and California Dept of Fish and Wildlife.

Unknown source oil impacts should be reported to Lourdes Mahoney at 813-391-4657 (lmahony@cteh.com)

SAFETY MESSAGE

All personnel are reminded to keep hydrated and take rest breaks at a 50/10 work/rest ratio.

PPE: Tyvek suits, gloves, safety glass, neoprene boots. Avoid walking near waterways.

PFD's must be worn if the potential for drowning exists.

All response personnel are to be cautious of moving vehicles at all times and look in all directions before proceeding. Response personnel should be aware that all railroad tracks are in active use and should show extreme caution when operating in vicinity of tracks.

Report All Injuries require a immediate notification to Direct Supervisor.

HISTORICAL/CULTURAL GUIDELINES

Leave cultural materials in place at the site of discovery, and mark its location.

Stop clean-up work in the vicinity surrounding the site, within a 6ft radius.

Immediately inform the field supervisor, who in turn, should immediately inform the FOSC and/or an appropriately designated cultural resource specialist. Obtain/provide location on map by indicating latitude/longitude.

In the event a scheduled meal is not made available to your crew, report this immediately to your Branch Director and Logistics Chief Brian Shive 832-341-4719

No work in estuary or creek habitats without biological monitor and approval from EUL.

7. Work Assignments					
Excavation Task force will carry out operations as per the Attached Excavation plan.					
Section 2/3/4/5 Task Force Shall:					
-Conduct removal operations of oil and contaminated solid waste in accordance with the approved Section Plan.					
-All lifting operations will be conducted in accordance with the UC approved Lift Plan.					
Sample according to the approved Sample Confirmation Plan for Sections 1 thru 4.					
No lane closures on Wednesday the 17th.					
Southbound 101 passing lane will be closed Thursday, June 18th, 0900-1800					
Southbound 101 passing lane will be closed Friday, June 19th, 0900-1700					
8. Special Instructions					
Excavation Task Force					
Safety Officers and air monitoring shall be present during operations					
Prior to excavations archeologist shall be consulted and if there are any cultural or historic resource concerns, archeologist shall be present to monitor the operations					
1. A minimum of 25 feet from the potential release locations shall be maintained					
2. All recovered oil shall be quantified and disposed of in accordance with the waste management plan.

Instructions for Dead Wildlife and Natural Resource Protection.					
HAZARD MITIGATION					
-All personnel operating in the restricted area shall wear level D (hard hats, safety toe boots, safety glasses, FRC clothing).					
-Respiratory protection (full face air purifying respirator with OV-P100 cartridges) may be required to be used by all personnel based on continuous air monitoring readings.					
-Engineering controls such as vapor barriers and portable ventilation shall be used in the evacuation area prior to use of respiratory protection.					
-All personnel are reminded to stay hydrated and take breaks as needed.					
- Notify Assistant Safety Officer if safety issues arise.					
SAFETY MESSAGE					
All response personnel are to be cautious of moving vehicles at all times and look in all directions before proceeding. Response personnel should be aware that all railroad tracks are in active use and should show extreme caution when operating in vicinity of tracks.

HISTORICAL/CULTURAL/ENVIRONMENTAL GUIDELINES

- Leave cultural materials in place at the site of discovery, and mark its location.
- Stop clean-up work in the vicinity surrounding the site, within a 6ft radius.
- Immediately inform the field supervisor, who in turn, should immediately inform the FOSC and/or an appropriately designated cultural resource specialist. Obtain/provide location on map by indicating latitude/longitude.
- Wildlife - Depending on depth of trench/excavation consult with ENV Unit regarding covering at night to reduce entrapment of animals and/or exposure to contaminants.

Report All Injuries require a immediate notification to Direct Supervisor.

7. Work Assignments							
Prevent unauthorized persons from entering or remaining in the spill area, staging areas, and the ICP. Contact and identify all persons not readily identifiable. Escort any unauthorized person from the area.							
Land units- Contact any unidentified vehicle parked in the area with emphasis on highway 101 where access to the beach can be made. Remove all unauthorized persons and vehicles. Do not loiter on or around the railway.							
Water units- Contact any unidentified vessels entering or in the spill zone. Divert or escort unauthorized vessels from the spill area							
8. Special Instructions							
Identify any persons or vessels that may need decontamination. Personnel are reminded to stay hydrated and work rest regimen as necessary.							
Instructions for Dead Wildlife and Natural Resource Protection:							
Any LIVE oiled wildlife (birds, mammals, or sea turtles) observed or incidentally collected in clean up operations should be immediately called in to the Wildlife Hotline at 877-823-6926.							
Any DEAD oiled birds, mammals, or sea turtles observed as part of cleanup operations should be called in to the team's supervisor. Supervisors can instruct the team in separating the oiled animal from the regular waste stream and (ideally) collecting it in a separate plastic bag, labeled with division/assignment area, and called into the Wildlife Hotline at 877-823-6926 for Recovery personnel to arrange pick up.							
For all other DEAD oiled wildlife (marine organisms) discontinue segregating these - they will not be picked up. Dispose with the rest of the oiled material being removed.							
Unknown source oil impacts should be reported to Lourdes Mahoney at 813-391-4657 (lmahony@cteh.com)							
Do not initiate any on-shore response or cleanup at Coal Oil Point without consulting the USFWS and California Dept of Fish and Wildlife.							
On Water: Avoid entering kelp beds as much as possible. Avoid boat traffic traveling near or through flocks of seabirds resting on water, stay 1000 ft away from nesting seabirds. If sea otter is observed keep clear and call Mike Harris immediately. 831-212-7090							
SAFETY MESSAGE							
All response personnel are to be cautious of moving vehicles at all times and look in all directions before proceeding. Response personnel should be aware that all railroad tracks are in active use and should show extreme caution when operating in vicinity of tracks.

8. Work Assignment Special Instructions, Special Equipment/Supplies Needed for Assignment SCAT MINIMIZATION MEASURES Habitat-specific Measures These measures are intended to minimize impacts to all biological resources within the habitat and should be implemented to the extent possible regardless of whether listed species are present. Marine <ul style="list-style-type: none"> • Avoid entering kelp beds as much as possible. • Avoid boat traffic traveling near or through flocks of seabirds resting in the water. • If a sea otter is observed, keep all response activities as far away from the animal(s) as possible until an expert can be consulted. Riparian <ul style="list-style-type: none"> • Avoid entering wetted areas as much as possible. • Avoid disturbing vegetation as much as possible. • Use preexisting access routes when possible. Sandy Beach/Dune <ul style="list-style-type: none"> • Avoid entering vegetated dune habitat as much as possible. • If vehicle traffic is required in the beach, travel should be restricted to the wet sand as much as possible and should avoid driving over wrack. • Vehicle traffic should be operated at slow enough speeds to avoid/minimize impacts to wildlife (approximately 5 to 10 miles per hour). • Use pre-existing access routes through dune habitat; if new access routes are necessary a biologist should be consulted on their location. Estuarine <ul style="list-style-type: none"> • Avoid entering wetted habitat as much as possible. • Avoid disturbing vegetation as much as possible. • Utilize existing access routes; if new access routes are necessary a biologist should be consulted on their location. • A biologist should look for nests and establish suitable buffer areas to prevent impacts. Coastal Bluff <ul style="list-style-type: none"> • Utilize existing access routes; if new access routes are necessary a biologist should be consulted on their location. • Any listed plant species should be flagged and avoided. Species-specific Measures These measures are specifically targeted to minimize impacts to listed species during initial response, USFWS should be contacted immediately to provide incident-specific measures to best protect these species. Tidewater goby <ul style="list-style-type: none"> • Foot traffic entering wetted areas should be avoided to the maximum extent practical to prevent crushing tidewater gobies, their burrows, and eggs. Least Bell's vireos and/or southwestern willow flycatchers <ul style="list-style-type: none"> • Disturbance of riparian vegetation should be avoided as much as possible. • If vegetation removal is required, roots should be left in place as much as possible. • A qualified biologist should be present as much as possible during activities that impact suitable habitat. California least tern and/or Western snowy plover <ul style="list-style-type: none"> • A qualified biologist should identify areas that may contain nests or chicks, and any entry into these areas should be avoided. • A qualified biologist should identify and demarcate access and egress routes. • The number of vehicles and number of vehicle trips should be reduced to the minimum needed to achieve the mission. • All activities near nests or chicks should occur on the lower beach (wet sand), if possible. • Watch for and avoid western snowy plovers sheltering in tire tracks and sandy depressions. • If vehicles are used, speed should be kept to less than 10 mph, and vehicles should remain on the lower beach (wet sand), if possible. If it is not possible to remain on the lower beach (e.g., it is high tide), responders should stop every 100 m and scan ahead with binoculars to look for western snowy plovers and California least terns on the beach. California red-legged frog <ul style="list-style-type: none"> • All egg masses should be avoided as much as possible.

NOAA/NOS/CO-OPS
Weekly Tide Prediction for GAVIOTA STATE PARK, PACIFIC OCEAN, CA

StationId 9411399

From: 2015/06/16 - 2015/06/22

Units: Feet Time Zone: LST/LDT Datum: MLLW

Disclaimer: These data are based upon the latest information available as of the date of your request, and may differ from the published tide tables.

High/Low Tide Predictions

Station Name: GAVIOTA STATE PARK, PACIFIC OCEAN, CA

Parameter: Weekly

Product: Tide Prediction

Start Date & Time: 2015/06/16 12:00AM

End Date & Time: 2015/06/22 11:59PM

Source: NOAA/NOS/CO-OPS

Prediction Type: Harmonic

Datum: MLLW

Height Units: Feet

Time Zone: LST/LDT

GENERAL MESSAGE

COPY

TO: Operations and Planning (Environmental Unit)	POSITION:	
FROM: Refugio Incident - Unified Command	POSITION:	
SUBJECT: Amendment to CAT document	DATE: June 16, 2015	TIME:

MESSAGE:

The Unified Command has determined that removal and cleanup of oil from cobble and solid surfaces (bedrock and cliff face) should proceed across the entire beach in those Divisions that have not achieved cleanup endpoints. Constraints (limitations) to cleanup were identified in the Constraints Assessment Team (CAT): Activities Related to Cleaning of Cliff Faces and Contiguous (sic) Rocky Prominences; June 6, 2015. Certain cleanup constraints identified in the CAT document still apply while others have been superseded by the Unified Command decision and therefore are no longer in effect. The intent of this amendment is to clarify which elements of the CAT document remain in effect and those that do not.

Cultural and Archaeological/Historic Properties constraints remain unchanged and the cultural monitors were consulted and agree with this course of action.

Geology: "Unconsolidated soil/sediment (alluvium) with vertical faces exclude from work" remains unchanged.

THE REMAINING TERMS AND CONDITIONS IN THE GEOLOGY SECTION OF THE CAT DOCUMENT REGARDING WORK EXCLUSION ZONES ARE NO LONGER IN EFFECT. OIL REMOVAL AND CLEANUP CAN PROCEED UP TO THE BASE OF THE CLIFF AS LONG AS THERE ARE NO OVERHEAD HAZARDS AND IF FOLLOWS THE TASKING FOUND IN THE IC204.

Safety Monitors will utilize audible horns (alarms) to alert crew to possible falling rocks.

---------------------------------------	--

3. Safety Message: Heat Prevention Plan and Expected High Temperatures

- 1) High air temperatures and elevated humidity is expected. Heat illness continues to be a hazard for this response plan. Make sure these elements are followed to meet the heat illness prevention plan:
 - a) Access to shade.
 - b) Monitor the temperatures and increase water and breaks if necessary.
 - c) Cool down breaks with water and rest in the shade.
 - d) Drink cool water
 - e) Notify your supervisor if you have symptoms of heat stress.
 - f) Remove your top when returning from and reporting for breaks. No need to tape your gloves.
 - g) Communicate with your coworker and supervisor about hydration and rest breaks
 - h) Minimize clothing layers. Unzip coveralls and tie around the waist if the task does not impact your upper body.
- 2) For helicopter operations, the minimum distance is 500 feet from people or the cliffs. No hovering over work areas.
